

CULTIVAR DA OLIO

**THE MOST WIDESPREAD
IN VILLA VANGILE**

CULTIVAR

MORAIOLO

LECCINO

FRANTOIO

MAURINO

PENDOLINO

MORAIOLO

Moraiolo is a rustic plant with reduced resistance to bad weather. It has a rather small crown, with not very extensive branching.

It is characterized by a high content of polyphenols.

- **Pollination: self-sterile.**
- **Fruit: spherical shape, black color with purple shades.**
- **Harvest period: mid-October – early November.**
- **Productivity: maximum ovarian abortion at 25%, yield at 18-20%.**
- **Organoleptic properties: green-gold oil, with a medium structure. Bitter and spicy taste.**

LECCINO

This variety presents itself very well on an aesthetic level and can reach large dimensions. It has drooping branches that vaguely resemble those of a weeping willow.

Leccino shows a particular tolerance to climatic adversities and to some pathologies.

- **Pollination: self-sterile.**
- **Fruit: medium size, slightly asymmetrical, purplish-black colour.**
- **Harvest period: late October – early November.**
- **Productivity: ovarian abortion less than 10%, yield 15-18%.**
- **Organoleptic properties: golden-yellow oil with greenish hues. Fragrant, fruity, slightly bitter and not very aromatic. In case of late harvest, the flavor is sweeter and more rounded.**

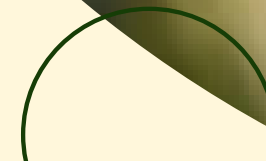

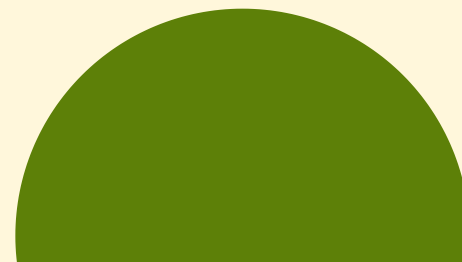

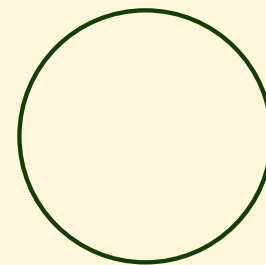

FRANTOIO

The Frantoio is a medium-sized tree, with a large crown and very dense branching.

Like Moraiolo, this cultivar is also very sensitive to cold.

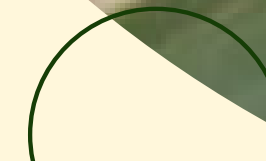

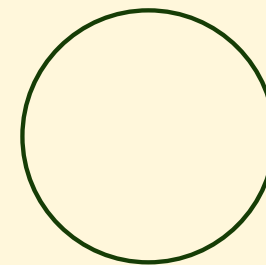

- **Pollination: self-fertile.**
- **Fruit: black-purple color and elongated shape.**
- **Harvest period: November.**
- **Productivity: ovarian abortion around 10%, yield at 20%.**
- **Organoleptic properties: dark green oil with golden reflections, dense and aromatic.**

MAURINO

It is characterized by its vigorous and dense fronds. The Maurino resists fog and humidity well, which often cause fungal diseases.

- **Pollination: pollinator.**
- **Fruit: purple color and elliptical shape.**
- **Harvest period: mid-October – early November.**
- **Productivity: abortion around 10%, yield at 20%.**
- **Organoleptic properties: destructured oil, very delicate. Sweet and fruity.**

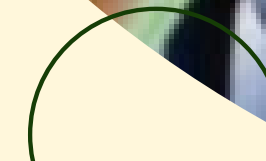

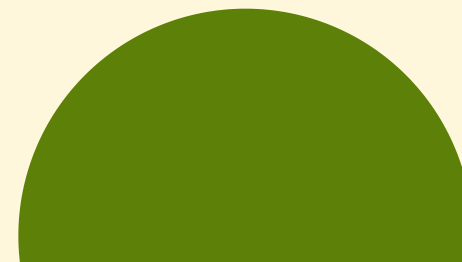

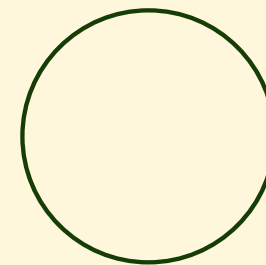

PENDOLINO

Pendolino is highly appreciated not only for the oil it produces but also for its ornamental characteristics. It is a medium-high vigor tree with a marked pendulous habit.

Very sensitive to cold.

- **Pollination: pollinator.**
- **Fruit: small and black, with an obovate shape.**
- **Harvest period: November.**
- **Productivity: ovarian abortion around 10-15%, yield at 19-22%.**
- **Organoleptic properties: yellow oil, delicate and pleasant flavour.**
